

RentiX

Timing Software for Rental Karting

Advancing the Art of Timing

RentiX is a specially designed program for rental karting. The software works with AMB's TranX140 timing system. At the end of each race, operators can print times for individual drivers and track the number of races and laps for each kart. RentiX displays race results directly on a TV or PC screen and shares information regarding system maintenance.

Preparation Screen

Upon starting the RentiX program, a race preparation screen will be displayed. In this screen, operators can enter all data concerning the current heat and names of running competitors. Competitor names can be changed by simply double-clicking the current name field. Every time a new heat is started, the names will change to a default value. In addition, the preparation screen presents an option to print results automatically.

Results Screen

The Results Screen displays heat results during and after a scheduled race. Results are sorted on best lap time and can instantly be printed by selecting the print option.

Race Results Screen

The Race Results screen showcases current race results, sorted by laps and total time. Such results can once again be printed by selecting the printer option in the RentiX program.

Kart Info Screen

The Kart Info Screen summarizes all information recorded by the kart/transponder combination. Such information includes: number of rides, laps and running hours, along with when the first and last ride took place. Data collected and shared in this screen can be printed by selecting the printer option. As a summary, the Kart Info Screen manages and maintains total race hours carried out by each kart/transponder combination.

Heat preparation screen and Automatic Print Options after each heat

Results Screens in Best Lap Times or in Race Results
